## Totaal gemis aan standaards

J.H. ter Bekke

*Semantic*systems

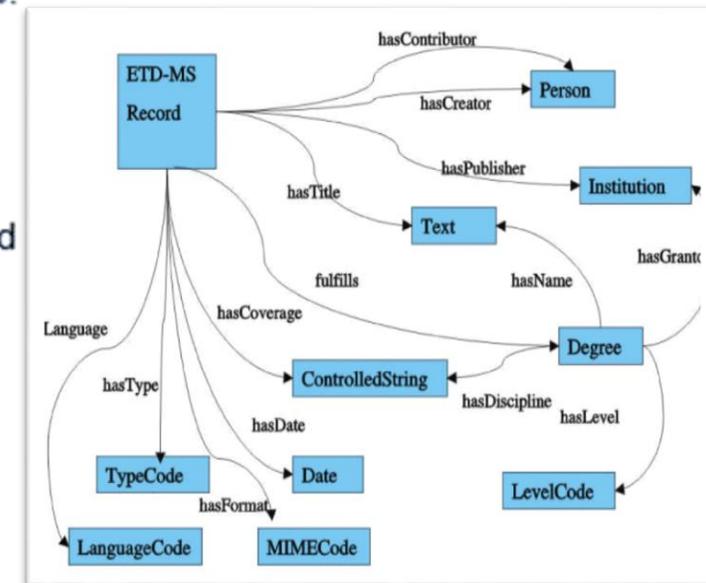

J.H. ter Bekke | Semantic Data Modeling | Semantic Data Language

## Welcome to the J.H. ter Bekke tribute site

The goal of this web site is to remember and share the ideas, vision and articles of **Johan ter Bekke**.<sup>SM</sup> has contributed a lot to the research of data modeling principles, data language design, database management systems and end user computing.

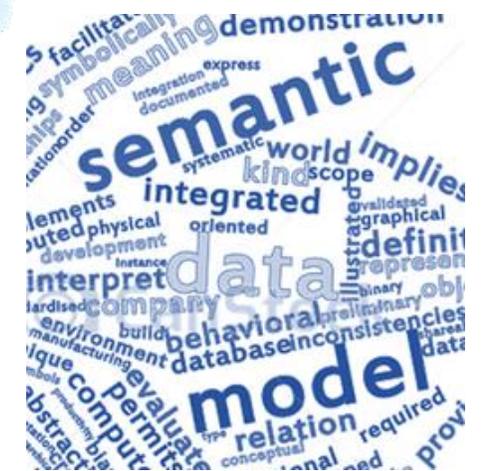

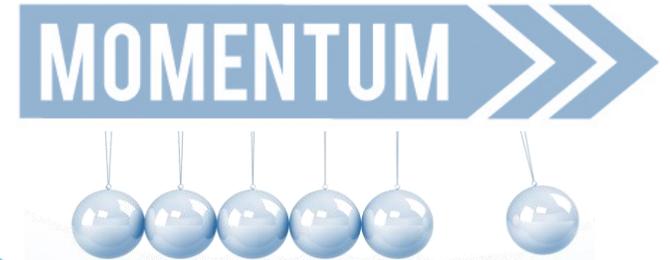

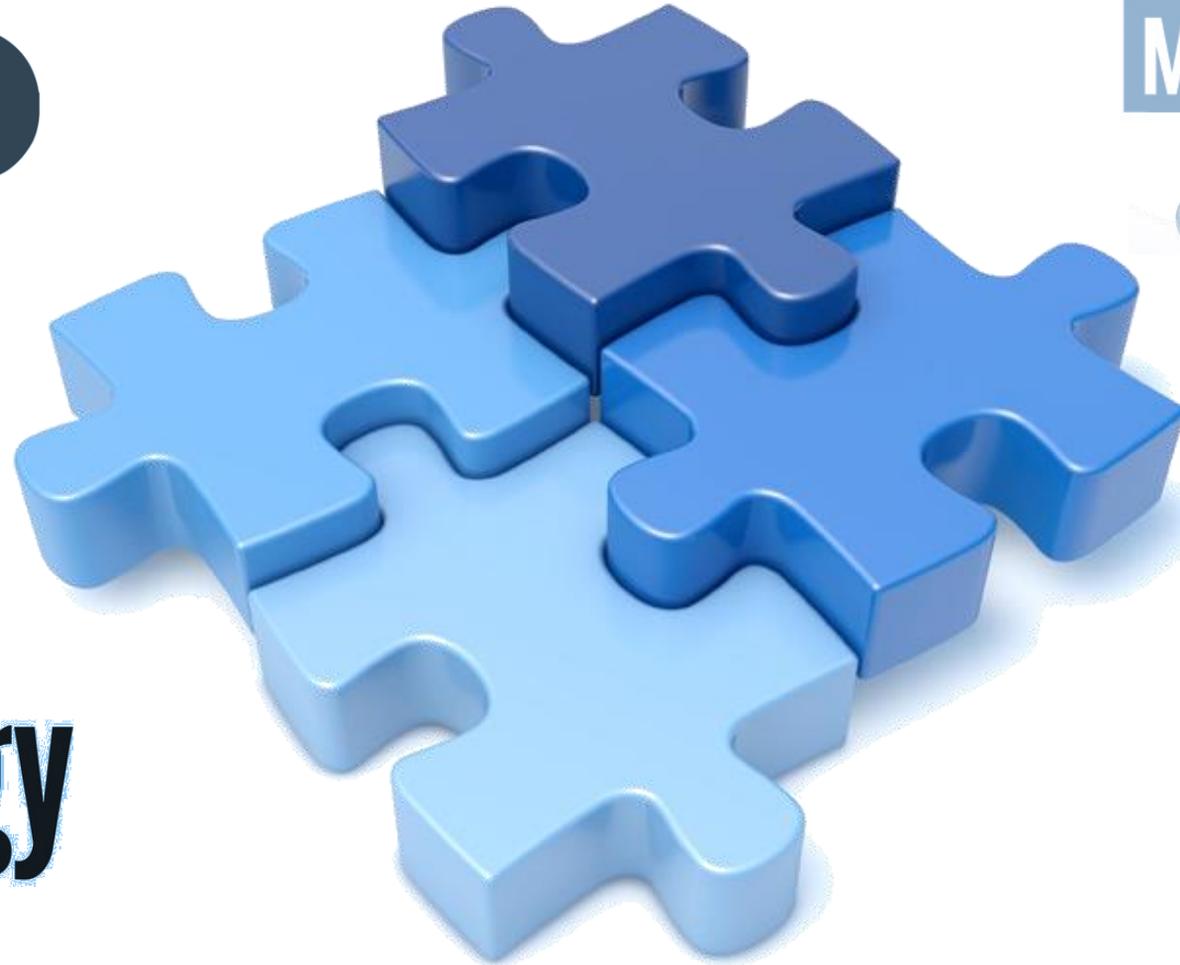

The main results of his work can be summarized as follows:

- A **new data modeling approach** based on semantic principles resulting in inherently specified data structures.
- A **new and efficient data language** (more suitable for end users than SQL) respecting data structure and avoiding the (join) pitfalls of SQL.
- The implementation of semantic modeling and manipulation concepts in the **Xplain DBMS**.

# XBRL : how it started in Nederland

Eerste live project  
in the world (except Australia)

- Unie van Waterschappen
- Semansys 1<sup>ste</sup> XBRL lid in Europe (USA)
- 2001 XBRL project Basic Life (in corporation with EY)
- NIVRA Congres RAI
- XBRL Work meeting London (2000)
- Aberdeen, US-GAAP, Semantic Analyzer

## 2002 - Aanbieding voor AFM

## 2002- Oprichting XBRL Nederland

### AGENDA - XBRL NEDERLAND

**Vergadering** : 02.01 oprichtingbijeenkomst  
**Datum** : 4 november 2002  
**Tijd** : 14.00 – 17.00 uur  
**Locatie** : ECP.NL : Overqoo 11, 2266 JZ, Leidschendam

Aanbieding aan **Autoriteit Financiële Markten**  
Afdeling Financiële Verslaggeving

Ten bate van **Systeem voor het aanleveren en analyseren van jaarverslaggeving door beursgenoteerde ondernemingen**

Door **Semansys Technologies**

Op verzoek van  
Drs. K.G. Schreuder RE RA  
Drs. M.G.A.P. Bastiaans  
SI-KGSc-02110294

### **Project team Architectuur**

Marc van Hilvoorde

Roland Hommes

Marco Roos

...

# Chronologie van the early days

**Juni 2005** Op 16 juni wordt de eerste versie, versie 0 NTP gelanceerd.

**Juli 2004** Start van het Nederlands Taxonomie Project (NTP). gefinancierd en aangestuurd door de Ministeries van Justitie

**Februari 2004** wordt door de Nederlandse overheid het startsein voor het programma ICTAL, een programma om lastenverlichting voor het bedrijfsleven te bewerkstelligen.

**September 2003** In Nederland beginnen de Unie van Waterschappen, het CBS aan één van de eerste XBRL implementaties.

**November 2002** Op 1 november wordt XBRL-Nederland opgericht.

THE BUSINESS REPORTING STANDARD

*Semansys*<sup>®</sup>

Veelzijdig, betrokken, innovatief

De volgende fase begint

Nieuwe periode van accelereren

# Enterprise Reporting using XBRL

Cees de Boer

Amsterdam, 8th Dec 2015

# The purpose of XBRL International

Improve the accountability and transparency of business performance globally

*Our standards are used right around the world, in different ways and for different kinds of reporting, but always to improve reporting.*

*Improve accountability and transparency – key to any act of record keeping.*

Our purpose is to **improve the accountability and transparency of business performance globally, by providing the open standard for data exchange in business reporting.**

*Business performance itself – not just reporting. “Business reporting” relates to all kinds of organizations including government.*

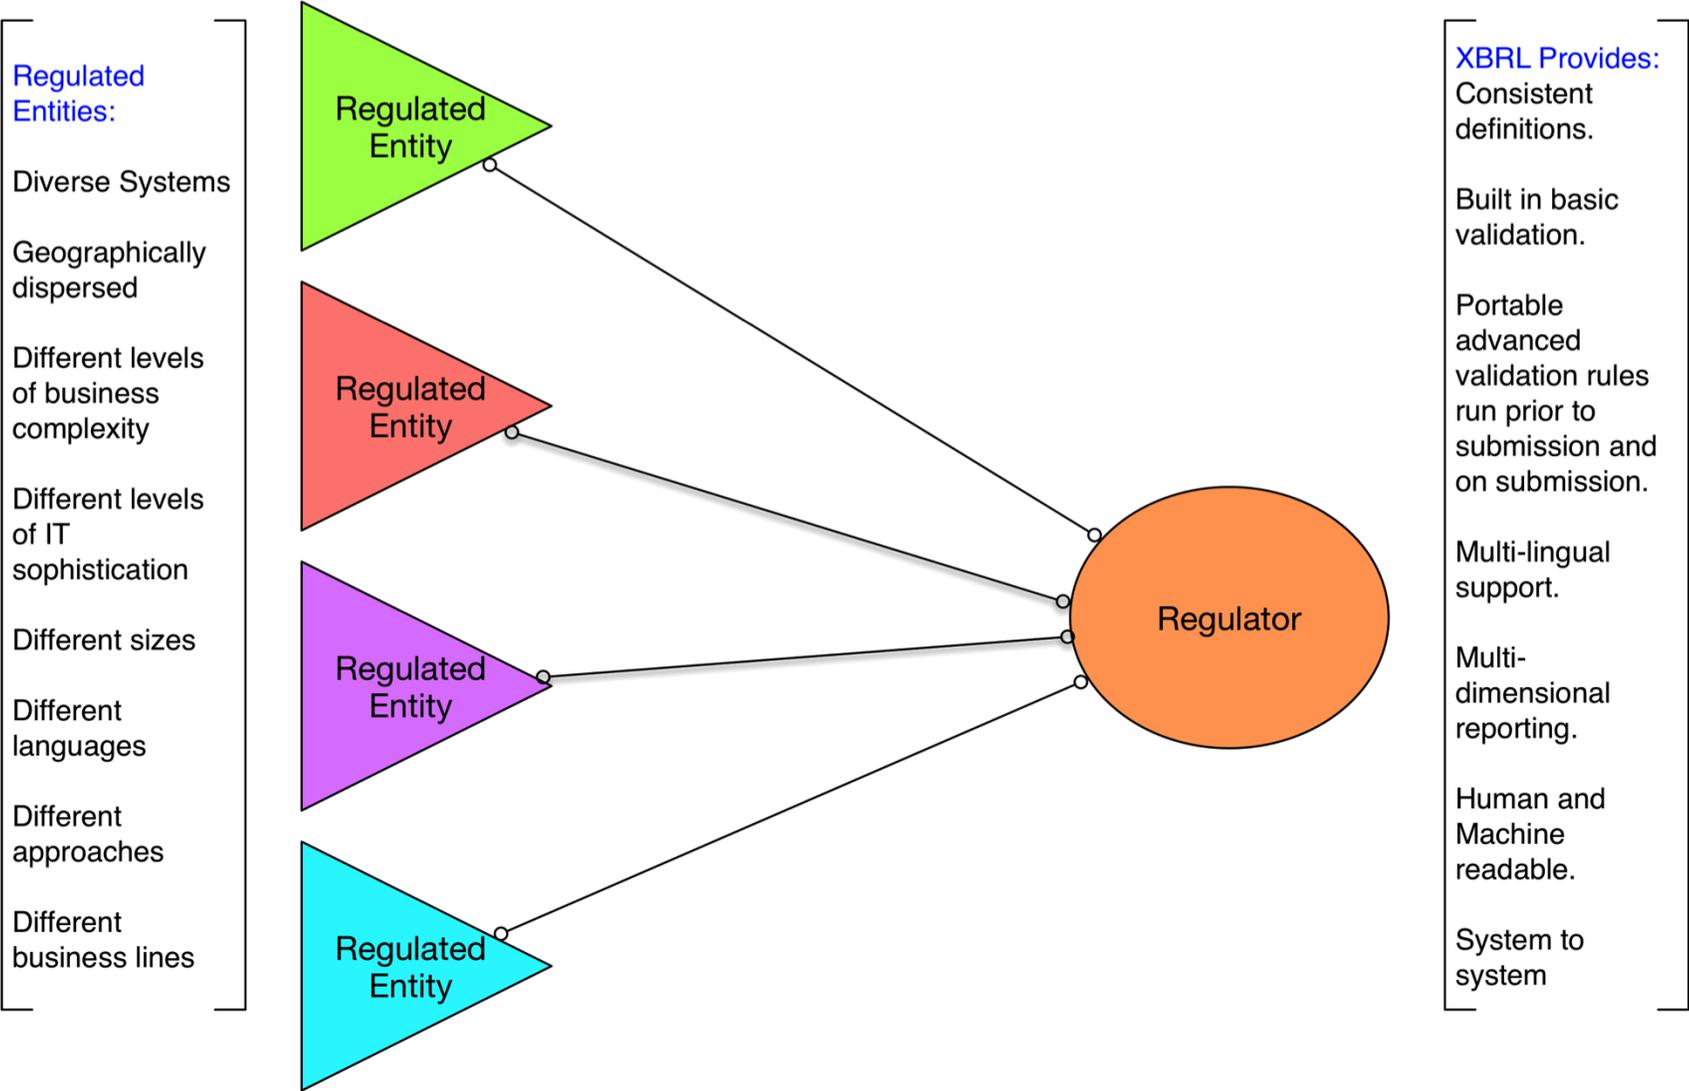

*We are the open standard for data exchange in business reporting – that’s how we improve business performance.*

# Purpose of reporting

Regulatory reporting and informing stakeholders – “the last mile”

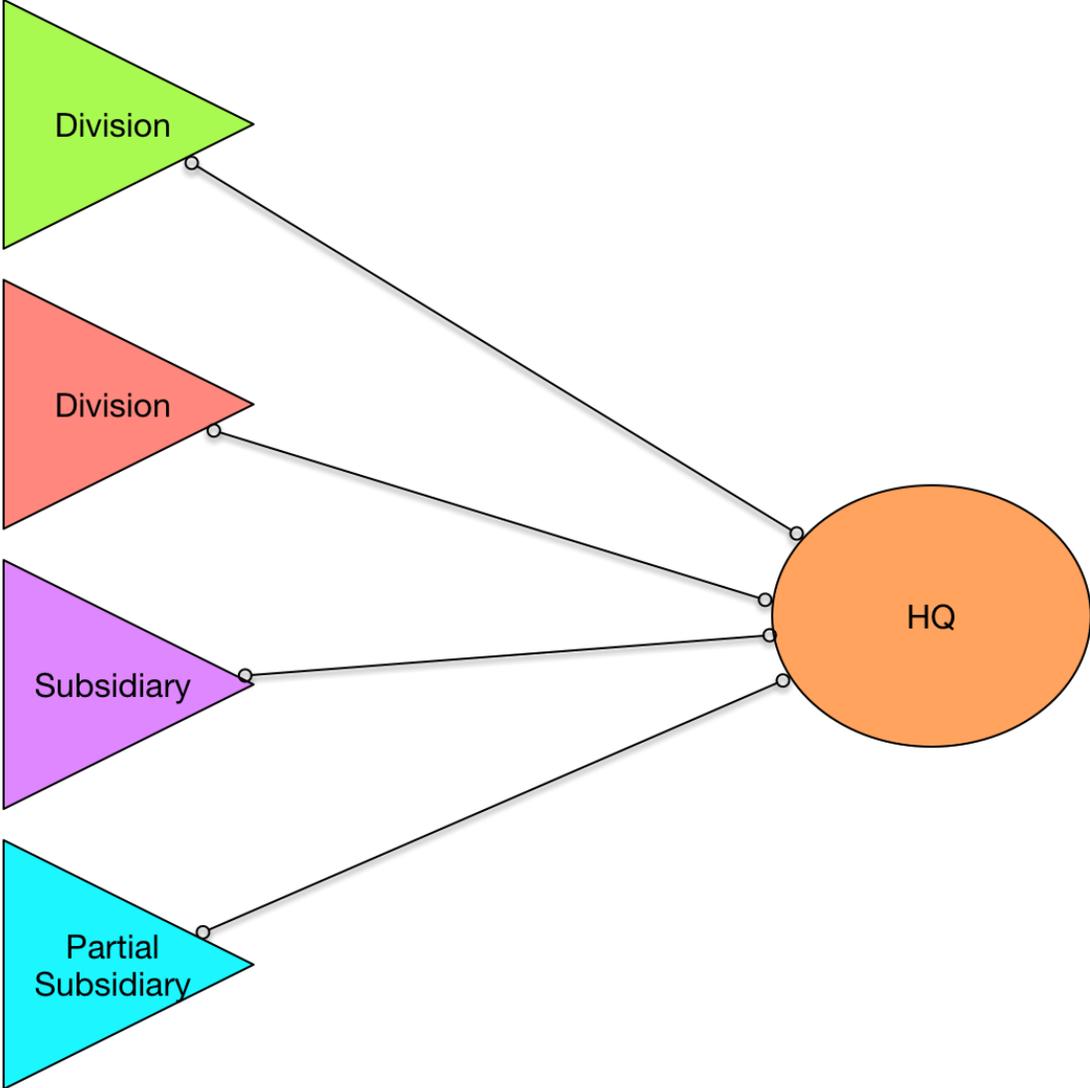

# XBRL widely adopted in many report to one (regulator)

# Within large enterprise also many report to one applies

- Large Enterprise
- Diverse Systems
- Geographically dispersed
- Different levels of business complexity
- Different levels of IT sophistication
- Different sizes
- Different languages
- Different approaches
- Different business lines

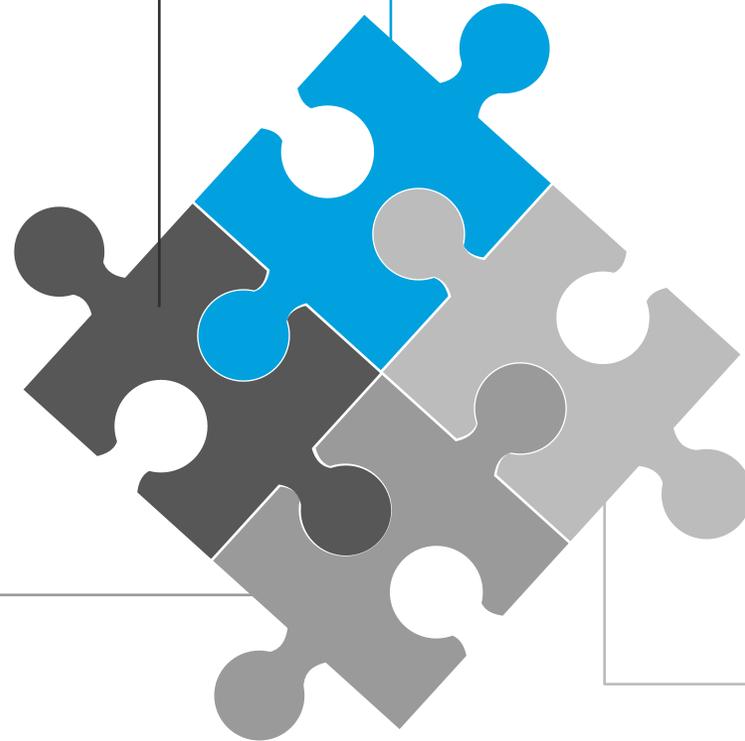

- XBRL Provides:
  - Consistent definitions.
  - Built in basic validation.
  - Portable advanced validation rules run prior to submission and on submission.
  - Multi-lingual support.
  - Multi-dimensional reporting.
  - Human and Machine readable.
  - System to system

# Bringing the benefits of XBRL from Regulatory Reporting to Enterprise Reporting

Single definitions in a taxonomy mean there isn't a requirement to have a single software platform in the enterprise. It's **system independent**

Control **data quality** for better information and analytics

Should provide ability to conduct **real-time analysis** to support management decisions

Taxonomies provide **high quality definitions** owned by the business

# Case study – initial findings

Applying XBRL inside Enterprise at transactional level

## Case study

Shanghai Pudong Development Bank (SPDB) is the 46<sup>th</sup> largest bank in the world with assets approaching USD700bn. >30,000 employees. Has funded much of the development of Shanghai as a leading infrastructure bank.

## SPDB Shanghai

- Around 6000 elements in company extended taxonomy, covering items contained in General Ledger, Financial Reporting, Budgeting, Management Accounting and Statistics domains.
- Taxonomy also defines around 100 reports for statutory, market disclosure and internal purposes.
- System uses end of day balances pulled from several dozen source systems

# SPDB Shanghai

# Experience gained

## What does this mean

- It is very early days, but seems very promising
- We are working with XBRL China to create case studies, blue print architectures and hopefully to run workshops on this topic
- XII wants to encourage experimentation
- But this is not the real revolution.....

# The real revolution

- The real underlying revolution is not technology
- The real revolution is data standardisation using taxonomies
- Imagine a world with:
  - Big taxonomies / mapping capabilities
  - At transactional levels
  - Cost of data handling and reporting drops significantly
  - Huge comparability
  - Ability to analyse hugely enhanced
  - Obviously all powered by XBRL

# Afscheid van Paul namens deelnemers en NBA

“Okay Houston, we've had a problem”

Dank voor uw aandacht.
